The above table applies to ordinary years only. For leap year, one day must be added to each number of days after February 28.

EXAMPLE.—To find the number of days between June 3, 1892, and February 16, 1893. The figures opposite the third day in the first June column are 154; those opposite the sixteenth day in the second February column are 412. Subtract the first from the second product—*i. e.*, 154 from 412, and the result is 258, the number of days between the two dates.

Weight per Bushel of Grain, Etc.

The following Table shows the number of pounds per bushel required, by the law or custom, in the sale of articles specified in the several States of the Union:
