

houses where there is a lot of fleas. Throw these in there. By golly in 24 hours there won't be no fleas in there. These will kill them.

(The leaves?)

Uh huh, just the scent of it. Fleas can't stand that and it'll kill them. And in the creek, around that Washita River, hell you seen them, they get this big them walnuts. But in the mountains they small.

(Do they stay green?)

No. Inside of that is the walnut. That's just the hull see.

(When do they get ripe?)

Oh, they'll be ripe August, September. Young, but about next month you can get them and put them in a chicken house or where there are a lot of fleas. These will kill them.

(Walks to another area.) A buttercup, heh, heh. I imagine you could transplant them. I never have tried it, but I imagine they could be transplanted. Boy, they're pretty. But why be gone in another week or so. Like any other plant. See in May and June, that's when they come out. I imagine you could transplant them or dig them up. They're pretty. I never have tried it, but imagine they made good...

These are the mountain uh.

(If we see some of that purple cone flower along the way could we stop?)

Yeah, I got some of that uh, there's some of that there, that toothache medicine. We can go clear around and come back.

(Irrelevant conversation in the car.)

ARROW PLANT:

Let me show you ~~some~~ something else. You find these arrows. We used to make arrows out of these little grasses and shoot these grasshoppers with.

It's similar. Almost, it's not this. I thought it was that. Well the way
