

of research. No body in this world would ever can take credit that Mr. Dodge did that. He tried to do the very things that I'm talking about today, but he did not have the council by his side to help him out on it.

Alice in background: Didn't the appropriation of 200 thousand dollars--

Yes, turn it off just a minute. I want you to get it all because you are going to play it to other people and I want them to listen to these things. (Sentence not clear.) ---and he had instructed them to go out and get something going for the tribe and don't come back and don't hold another meeting until you do. He has been a very accomplished man. I will say that he is a fine Superintendent, but, then, what has happened? We haven't had the confidence of people to raise this minerals up to where it really ought to be and the laws are so old that control it that we couldn't elevate it too much and else we get something done in regards to this leasing. Now, what we need is more oil wells. We don't need to lease land, and that will get an oil well, but what we need to do is to lease a piece of property and get an oil well on it. If they hit a good oil well, then, they demand that they drill another oil well. But the way it is, we got hundreds and hundreds of leases that have just got one oil well, and they know that the oil is there and these people don't need the money. I got oil people tell me that we don't need the money, but we need the work. It is better place to have the money in the bank than 15 hundred people (words not clear).

(A train whistle is heard in the background.)
