

strength in their fingers and in their hands so that when they find that thing, well, they know how to deal with it. They know to bring it down. And when they bring it down, well, the man coughs a lot. I've seen that. That man was practically gone, dying. But they knew something was wrong, I don't know. He lived many years after that. That's one form of doctoring that we know. And we have these what they call, I don't know what it's called, (Indian word), what they call it. It's kinda pumping, you know, and kinda makes you get a backache. Well, that's, they doctor that too, you know. They know where it's at too, you see. That's one from of doctoring you know. That's common, you know, doctoring. Really is helpful and they, these fever like pneumonia. They kinda of a high fever. They hack one another. I guess you see them too in the side of the temple here, and on top of the head, and sometimes on the back of the neck on the side. That was in about each side up there someplace. And they hack one another here in the chest, one side, you know, up here. See, my wife's folks, her mother and father died of a tuberculosis or T.B. you know. And my wife had it, but she got healed in church, you know or God, you know, healed, but by going back to the Indian ways, why, you know, why, she didn't, she wasn't sick at that time, but they thought I might be that way. So, they hacked me right here by the side. And they keep, they got something out, you know, that wasn't supposed to be there, blood was no good, you know, stringy, things like that until they get you know, real blood, good blood out of there. Then, they stopped it. That's one way of doctoring and they cured or healed. These people that have pneumonia or things like that, if they hack them in time see? Sometimes, they put them on a back here too. That's kind of a hacking that's good for that. See, that'll take the pressure off, see.
