

And I know I'd studied a lot. I have two books on trees. And out at the park and my two grandchildren have had to make a report on trees and boys and I have gone out and got leaves from trees. It's so interest to me.

(It is interesting.)

Oh! I love animals and trees (interruption).

(Yes!)

It's wild flowers, and she said now I could do something like that, cause she has beautiful prints.

(Ah-hum.)

And she said now I could make stationery there or something. She doesn't have to because but she just loves them. But, she been down here to talk to the Study Clubs. I quit all my clubs. I just don't feel like going all the time.

(Surely.)

And I have to reserve my strength to do all the things to do. Today I had to let my house go. And I said I'm going to be ready to go when she comes because---

(Along that same line, I find it most interesting visiting with these full-bloods. It seems to be a special gift among them that they know the things of nature. They can go out and stand and tell you the name of every tree, plant that they can see. And how they do it, I don't know. They can tell you the Indian names, the English name and what it's used for and what it's good for. And I think it's marvelous that they have that quality.)

Elizabeth has always loved flowers, and she has really getting into it deep now. And she has given lectures in Tulsa. And she has her slides and she give her comentary along in there.

(Ah-hum, that would mean to be most interesting.)
