

and then the ore went down to 410. (Man named Carl talking in background, but is still inaudible) Yeah. Now there's a good hole they drilled right out here too, and the drift going that way. So I can mine that way. It's on the 267 foot level. (inaudible). There's one--I didn't either, but they say they are and it shows it on the map. (Carl talking in background). Yeah.

(What's a pool drift?)

Just a small drift. (conversation in background) Oh. Well, this one shows it going this way Carl, and it shows 25 foot of ore. But where they got that information I don't know. I never did find the drift. We mined here a long time and I never did see it. But it sure--I've got a map showing it right on there.

(Carl talking in background for several sentences. He is talking about the mine, but the tape is inaudible. The man apparently worked in this mine a long time ago and is telling about how they were working the mine at that time.) Yeah. Do you remember what level that was on? (inaudible conversation). Oh, that's way down. That's below what we will be in. Now this shows it on the 267 level going out here--25 foot of ore. And they went out a 150 foot ahead of the drift and drilled a hole just two years ago and it shows good ore in here. (Unidentified man talking again, but tape is inaudible. He is giving more details about the mine) Yeah.

(Well, is this still Indian land? I mean will the royalty go to the Indians?)

No. No, this belongs to an individual, Mrs. McBee. That's her son that's with me here a while ago.

(Emma Gordon McBee?)

Um-huh.

(Well, she's Indian.)

She's Indian, but it's not under the Indian Agency.

(Not under the agency?)

No. Huh-uh. She owns it individually. It was at one time, given to her by
