

Oh, I have some medicines that good for stomach trouble and some medicines...you know sometimes people get a lot of stuff in their stomach and its just like...anybody with asthama...that can be taken out with this medicine. Boil this medicine and make tea out of it, and then they come and ask you to doctor them and you fix that tea for them. Give them a cup full and they drink it down. Give them another one, give them another one till they just full up, they have so much of that medicine in there stomach. Set around for about ten or fifteen minutes and that medicine just goes in their stomach and stirs all that fluid and whatever it is...when you got asthama you got all those bronmicha (bronzial) tubes filled with slobber...all filled up in there and that's why they can't gettheir breath. And they get tired. They just...that medicine just take it out. It come out issself, that just draws it out itself, that medicine, you don't have to try to vomit or anything.

(What is it...)

Through the mouth, they just vomit it out and some of it comes through the nose. It runs all out and then they get well. You don't have to treat them another day. That's all it takes, just one treatment. Do that for anybody.

(Do you make it from a plant?)

From an herb. We haven't got any yet right now. Just as soon as it gets a little cooler we going to dig a lot of our medicines because we got to have it through the winter. Anybody get sick. Right now we can't go out because they so many rattlesnakes up there in the mountains.

(That's where you get it?)
