

any good, see, because the crazy oil companies they jest--jest like they polluted this stream over here, that was a good stream, I know everybody went to the creek to get water, you know, we took the washin' and went there and that's the way everybody washed.

WASHING MACHINES:

I wanna tell you semethin'. Do you think that the modern washing machine automatic washing machine is a timesaver like they say on the TV? That's the biggest fabrication that ever hit the screen. I wanna show you sometin' and you, you can prove this out your own self. You know the family that got three kids and lives out, I don't mean lives in town or an apartment, you know. The kids get out and get dirty, they reall mop up the dirt. And if the husband works in the oilfield or does any, you know, does common labor, he gets dirty. And the mother she gets dirty because sh'e gonna have to handle these kids, you know and clean 'em and everything. All right. Their clothes really get dirty--they don't jest get dirty from perspiration see. All right, every load of clothes that you put in an automatic washer machine it takes four tubs of water, all right, and it takes a cup of soap or detergent for every load that go in there. And it takes thirty minutes to do that. And two thirds of the time if the clothes really dirty they not clean when they come out. Mine got I used to do mine on the laundramats, you know, and they looked like mly sheets looked terrible, I was shamed to hagg 'em out. I'd dry 'em in the doggone dryer before I'd put 'em out on the line and these little girls their clothes their panties looked like mud. All right, I can take that old maytag out there and I take a washing maching full of water and from a cup and a half to two pcups of soap and I wash my whole washing. And it comes out clean. And three tubs of rinse water and one
