

(You want to get me to sneeze?)

It's fine, you can see how fine it is.

(Okay.)

It's real fine. (Mary is talking to someone in background. Much static on tape. Interviewer has taken sneezing powder.)

(I think you've poisoned me. (Laughter and sneezing). It sure works.)

(Laughter.)

I hope it works.

(How long is this going to last?)

That's all.

(More sneezing--I'll be sneezing for a little while yet. Sure is powerful.)

Sure is powerful.

(We can go over where that came from?)

Uh-huh sure can. Come when you have time.

(What?)

I said whenever you have time.

(Oh, alright. You see I'd like to find them growing. If I could get to pick them take them back to Norman and go to the library and look up the seeds, read about them.)

Yes, uh-huh.

OTHER KINDS OF MEDICINE - PEYOTE

(What other kinds of medicine do you use?)

Oh there's whole lot of different kinds. There's--there's peyote--you know I hear people talk about it--it was--they are not going to let it come from Texas. You know that's where they get that peyote. They not going to let it come across into Oklahoma. That's what I heard lots of times. They're going to stop that using peyote. All these years ever since I was about 5 I've been using that medicine. I doctor with it And it didn't hurt me.
