letts this big cable - they had this big cable - had a great big pulley looking thing up there. They used to have a crow's nest up the top and there's always a. man worked up there." Somehow, now. I don't know now it operated but he operated some the mechanics up there. And now that would $\boldsymbol{1}$ - and they finally quit tha'.. and they got this big drill bit and somehow when going through roik they had a different action - now one of them 's got a thing called a kelley - but, that 's. a.later molel. Oh, they had that'about tiwenty years ago. And you don't watich; you get your hand cut ofl with that kelley. Jee. Then they have this thing now they do a lot of drilling and they use this mud. There is a mud out of west iexasy it's a blue mud ard you find it iround these beauty snops, after it's been reilinea and you put it on your face, you know. I've played in more of it than anytume Over in Eastern Oklahoma, is some of it. Ihere\{s a yellow and blue and - well ine red is not so bad, but that yellow ind h? siticks - Oooooh - and it rains, it is enough to kill your. And.it balls and you ball this ur on your feet. .ell ow iney refine that they take all the other jupk out of it, you know, the.t foreign kal ois. itt, And they put. that down there and their tools don't wear out so much. Nee, the eat, friction, time heat causes friction and causes their tools to, you gnow, wear out re cuick. And 'course then ther have diamonc bits-too. Now I don't.know, iff that is real diamonds or welat it is made out of, out anivay, it's a hara glass inisess at: use that'. Tome of 'em po 'round and 'round.
 Oty yes. Ihelped my dad diz one.
(nealiy. what was that like?)
We:l depend on what kind of ground you fot. You have to hajt a casing, you ant. You know, ouili a casirg, the "stze you foirf to b ild the we? 1 , and you se: at at Firs: you start to ouild and you dip ous a place, you know lbout two feet leer. tra is you'arezoirg to nake it square, it is muan easier to handle. tut instea: of
