BeIore the Indian Territory was surveyed and section lines estabilished, the main road out of Murphy to the River followed the foot of the hatis west and north until about even with the lerry. Then the road went restior about a mile down to the river. Anotner road mound up east and south over tne hills toward Peggs, with a tork going up 8pring Creek to Locust Grove. linen the roads were being locatad on tne newly staked section lines Mr. Layton recalls the first ilittie bridges constructed. They were of all log construction. Uprignts were sunk into the ground to solid footing, stringers and cross braces notched to lit, and the cross planking was of split logs notened to fit on the stringers. Abutments were ancnored and neld in place with rock riprap. No power machinery nad come into use then and all of trie road work was done with norse power, slip scraper and by hand.

On this day driving thru Murpny Communty the nalf dozen nouses scattered about belle the fact that nere was once a busy little tom. No stores exist anymore, the railroad was removed several years ago, and an air of saddness seems to hover about. In passing, wnen the raidroad lurst cane thru it was known as the fissourl, Oklahoma \& Gulf, but mas shortly charged to Kansas, Oklahoma and.Guif. The nign railroad ilill that carried the rails thru the town still remain somewhat as a monument to a happier day. Ora, remembers the construction daysof the railroad too. He yas a strong young fellow and worked on up the line in the building and laying ol the tracks. There was another section. of the construction coming from the north at the same time. The two crews met and finished thie construction in the center of the little town of Strang. It was a day of celebration, as one of the railroad officials got off the inaugural pasaenger train, a spike was remqued from the track and a gold spike driven it its place. $/$ Arter speeches and best wisnes, and"you guys never had it so good, , the railroad was dedicated to the great progress of the country. As the train pulled away, officials stood on the rear platiorm with hands raised $2 \theta^{\circ}$ if to bless the Indians with something tatitamount- to 'you need another hole in your head!' Pernaps some unspoken thougnts were in retaliation to the lact that the railroad official bent tne golden spike when he vas ariving it.

In later yeis Mr. Latton worked as a section hand on the railroad. He recalls that day in Klay, 1920 when the tom of Peggs was blown arfay. The section foreman took all but Layton and vanother man to help in the rescue and relici of the stricken community.

He tells of a tame when he nad taken a wagon load of com to the elc vator at Chouteau. While there a prairie fire came rom the south and mand men worked nard to save the elevator and tne tom, using wet gunng sacks to fight the blaze. A Mr. Snodgrass, who run the elevator, had the only car. in the town at that time, and to save it men pushed and nall carrieu it ta sarety. He remembers it was a brignt red car with wheels that stood lour feet. nigh, and nad.ilttle rubber tires. As was the bane of car omers in.tnose early days, the car. would not stath when needed. During. those days quite a bit or cotton was raised along Grand River and when it wasgathered they nauled it to the gin at Chouteau, which was run by Gien Adrins. Anotner. time when he was over at Chouteau, he was visiting with others at the depot waiting to see the train come thru. In-tnose doys the mail trains did not stop but grabbed the mail, sack as it went by. Incoring mail would be throm ofi the train as it came by tne depot. A short distance dow the track was a standard where the postmaster would hang the sack of outgoing mafl. Then, Fess Pollard was Postmaster, and they enjoyed seeing him nurrying to get the mail pouch on tne standard. Fess fad a peg leg and made quite a racket trying
to run, mhen he mas a littie late.
