
LIST OF PAPERS.

1. The Blaini group and the "Central geiss" in the Simla Himalayas. Vol. X, 204
2. Notes of a tour through Hangrang and Spiti. XII, 37
3. Note on the Section from Pangu to the Sash pass. XIV, 205
4. The Geology of Dalhousie. XV, 34
5. The Traps of Darang and Mandi. XVI, 155
6. The Geology of Chamba. XVI, 35
7. The Basalts of Bombay. XVI, 42
8. On the microscopic structure of some Dalhousie rocks. XVI, 129
10. On the altered Basalts of Dalhousie. XVI, 178
11. On the microscopic structure of some Sub-Himalayan rocks of tertiary age. XVI, 185
12. The Geology of Chauri and Sihunta. XVII, 34
13. On the microscopic structure of some Himalayan Granites and Gneissose Granites. XVII, 53
14. On the microscopic structure of some Arvalli rocks. XVI, 101
15. Fragments of slates and schists embedded in the Gneissose Granite of the N.W. Himalayas. XVII, 168
16. Further Notes on the Geology of Chamba. XVIII, 79
17. Notes on the Section from Simla to Waniat. XIX, 65
18. On the microscopic structure of eruptive rocks from the Central Himalayas. XIX, 115
19. The microscopic structure of the Mafat rocks of the Arvalli region. XIX, 161
20. Note on Indian image stones. XX, 43
21. On the microscopic structure of the Rajmahal and Deccan traps. XX, 104
22. The dolomite of the Chauri. XX, 112
23. Pressure metamorphism with reference to the gneissose-granite. XX, 203

INDEX.

Aden, lava of. Vol. XVI, 145
Alps: the geological history of the Alps and Himalayas compared. XV, 50
Amphibolites of the Chauri and Simla areas. XX, 116
" Satluj valley. XIX, 65
Amegysites, pseudo, formed by infiltration of acid water through a glassy base. XVI, 48
Andesite of Aden. XVI, 147
" Bhandal. XVIII, 94
" Rajmahal group. XX, 104
" Java. XVIII, 1
Anidesite, suggests that the term should be restricted to the lava form of diorite. XVI, 49

PART 4.] McMAHON: Himalayan Geology & Microscopic Petrology. 207

Aravalli region, Mafat rocks of. Vol. XIX, 161
" rocks, microscopic structure of. XVIII, 104
Ash, volcanic, of Huln. XVIII, 98
" Tioga. XVIII, 97
" " Ladak, Central Himalayas. XIX, 118
Augite in form of microscopic globules. XVI, 146
" altered by infiltration of water along cracks. XVI, 158
" metamorphosed into mina. XVI, 158
" in form of acicular microcliths. XVI, 44
Bakclo sandstones, microscopic structure of. XVI, 187
Basalt of Aden. XVII, 145
" (altered) of the Bhandal area. XVIII, 94
" of Bombay. XVII, 42
" (altered) between Chauri and Sihunta. XVII, 98
Bands of calcareous silt. XVII, 95
" compared with Kashmir traps. XVIII, 90
Beryl in Satluj valley granite. X, 219
" microscopic structure of. XVII, 58
Bhand sandstones, microscopic structure of. XVI, 185
" red clays, microscopic structure of. XVI, 187
Biotite of eruptive rocks compared with that of rocks of clastic origin. XVII, 68
" in gneissose granite, instances of crumbling due to traction. XVI, 123
Blaini limestone, a magnesian limestone. X, 210
" rests on the Blaini conglomerate. X, 204, 205, 607
" the pink coloured variety passes into blue conglomerate below Patanals. X, 211
" Sand. X, 211
" passes into a rock resembling a quartzite. X, 205
" series below Chauri. X, 210
" at Simla. X, 204
Bouma, basalts of. XVI, 42; XX, 114
Boudler of gneissose granite in the upper siltares conglomerate. XVI, 42
Boulders of river conglomerate on the top of Chandra Nama Pass. XII, 66; XVIII, 81
" at other places and inferences therefrom. XVIII, 80, 81
" suggestive of glacial action at Sihunta. XVII, 40
Cambrian series possibly represented in the Dalhousie area. XV, 40
Carboniferous limestone series at Dalhousie. XV, 36
" pass by imperceptible degrees into turracite. XV, 306
" were eroded in pre-tertiary times. XV, 190
" east of Chauri. XVII, 34
Carbonaceous slates at Dalhousie exhibit hypo-metamorphism near the gneissose-granite. XV, 35
Carbonaceous slates at Dalhousie correlated with the infra-Krol of Simla area. XV, 36
Carbon dioxide, liquid inclusions of, in Wangtu granite. XVII, 59
" Dohl quartzite. XVII, 102
Cavities—see Glass and Stone.
" liquid, with moving bubbles in quartz of Aden trachytes. XVI, 153, 158
" " secondary quartz in amegysites. XVI, 151, 179
" " veins in felsite. XVIII, 95
" " in secondary calcium. XX, 129
" " Huln epideite. X, 74
" secondary liquid cavities not distinguishable from primary cavities. X, 119
