A DINOSAUR PUZZLE—The old Wilson Center gymnasium is the only campus facility large enough to accommodate one of the most fascinating projects involved in the new Sam Noble Oklahoma Museum of Natural History. The bones of the world’s largest known apatosaurus, here surrounding vertebrate paleontology preparator Kyle Davies, are being assembled into a 90-to-100-foot full skeleton that will be part of the Ancient Life Gallery’s center attraction. Discovered in the Oklahoma Panhandle in the 1930s, the herbivorous creature, also known as the brontosaurus, was popularized as the Sinclair dino. The completed Clash of the Titans Diorama will be named for the families of museum donors Jon Rex and Ann Jones and Jonny and Brenda Jones.
