Doing it with Diesel on the Santa Fe

Hauling mile-long freight over steep mountainous grades calls for plenty of head-end power. Santa Fe is providing a lot of that power with the greatest fleet of 5400 horsepower Diesels in American railroading. 68 of these blue and yellow "head-ends" - the most powerful freight Diesels in the world - are now in operation over the toughest mountain climbs on the Santa Fe - and more are on order.

Santa Fe's dieselization program is another important step in getting the war freight through faster along "The Route to Tokyo" - and in providing the most modern freight equipment to meet transportation needs in the days of peace to come.
