THE HOTTEST TEAM IN TOWN
OU's two newest deans, Martin C. Jischke of the College of Engineering and Francis G. Stehli of the College of Geosciences have formed a unique administrative partnership to develop academic programs and shared research facilities for the University of Oklahoma's new Energy Center.

HIGH TECH: TO INHERIT THE FUTURE
The development of Oklahoma's economy in the '80s depends on the ability to attract high technology industries, and OU's Bill Banowsky believes those industries will look for excellence in higher education.

OUR LADY AT THE JOURNAL
Food editor of the Ladies' Home Journal? A home economist, right? Wrong. LHJ's Sue Barton Huffman left J-school with every intention of writing great American fiction and "fell into food" purely by accident.

REAL MEN DON'T MAKE QUICHE
There's a wealth of talent on the OU faculty and staff — and it isn't all confined to the classroom. Gourmet cooking is sweeping the kitchens of the community. Not surprisingly, many of the best chefs are men.

SEARCH FOR THE SAND CREEK DESCENDANTS
The Cheyenne Indians were willing to help the anthropologists with research into the mortality and fertility history of the plains tribe, but they suggested that the academicians might do something practical in the process. The result was using the computer to right an old wrong.

DING, DING, DING, GO THE TROLLEYS
There are very few parking spaces on OU's main campus. There are plenty of parking spaces at Lloyd Noble Center. The trick is to get from LNC to campus and back again. The answer is CART, a new mass transit.

THANKS FOR THE MEMORIES
The Varsity/Alumni game wasn't always picture perfect football. In fact, at times it could get downright bizarre. But both the fans who watched and the Sooner stars who played are sorry to see the old tradition go.
