Benson Writes of Amity

ATTACKING post-war proletarian nationalism, Oliver Benson, 32as, 33M.A., Oklahoma City, has outlined the steps of the league of nations toward an international consciousness in an article appearing in the December issue of World Unity.

"An attack on the culture element of nationalism must be waged carefully," he points out. "An urbane policy of persuasion is the only possible one, for so many complexities of race pride and hate are involved that the least lack of skill would arouse antagonism."

He declares that men and nations must be educated gradually with the medium of education not imposing, except imperceptibly, upon the ideals into which national freedom and independence have come to be sublimated.

To build this 'universal conscience' would require a longer time and more persistent tactics than even the spectacular pacific settlement of international disputes or the perennial disarmament and war-debt conferences," he writes.

"However, once established, it would insure the success of these latter programs; and afford a line of action across the gulf between the international anarchy of the past and the longed-for world confederation of the future—a gulf which the league hopes ultimately to bridge."

"The committee has devoted itself to four chief fields of activity: a research on questions of intellectual co-operation; the drafting of treaties and agreements; the sponsoring of international conferences and congresses; and the publication of periodicals and books."

"With regard to international agreements," he points out, "only a few formal treaty drafts have been prepared. But many informal agreements have been sponsored by the organization, while other international draft conventions await final action before adoption by the nations of the world."
