GILT EDGE MILK

A Recipe for Good Health

The vitamins and minerals in good milk make it rank among the top foods for health protection. Especially in winter weather, when colds and other illnesses are likely to develop quickly, do children and adults need protective foods that help them throw off an illness before it gets started.

And of course, in selecting a source of milk for health protection, it is vitally important to select a SAFE source. GILT EDGE PASTEURIZED "GRADE A" MILK is just the kind you are looking for. The "GRADE A" label means that the dairy farms and the dairy plant and the equipment and the methods of handling all meet the requirements of federal standards. And pasteurization is the scientific way of giving extra safety to milk.
