The expanding universe of today's student. His phone gives him easy contact with family and access to information stored in libraries, learning labs and computers.

A new era opens in educational communications. This year dormitory rooms at hundreds of colleges will have their own telephones.

What's happening? A new era in college dormitory life? Yes indeed. Colleges are installing room phones to help today's serious student use his time more prudently ... to talk with family, friends and others without standing in line at a public phone.

Colleges—and other institutions of learning, too—are facing up to the twin explosions of population and information by looking more and more to communications. On many campuses, for example, the student will use his phone to "attend" language labs and to retrieve other information recorded on tape. More students than ever before will be able to share lab facilities.

Soon the telephone will be used to get information from computers or set up problems for solution. Some AT&T colleges and high schools are already using teletypewriters for computer-assisted instruction.

Communications that make the fullest use of our educational resources are under continuing development by the Bell System. They are another way that we serve America's communications needs with imagination and economy. Providing useful, dependable service of all kinds at low cost.
