LOOKING TO THE FUTURE

(continued from page 83)

of research, as well as to good teaching.

After all, I am afraid that the unus-
usually large economies that we may
be forced to practice may slow down
our research work in the university.
This would be disappointing to me in
the extreme. We should make almost
any other kind of sacrifice rather than
to reduce the number of our research
projects or retard the progress of proj-
teats well under way. The fact is,
we need to find some way to extend
the scope of our research work rather
than merely to hold our own or to re-
duce the amount of it. This will prob-
ably mean that we must go to our
friends who are blessed with worldly
goods and ask for private benefactions.
Even in times like these, there are lit-
iterally millions of dollars in Oklahoma
that ought to be put to work in the
interest of science and human welfare.
I am determined to turn my hand to
this task.

There might be another way out if
we are ingenious enough to make it
a real possibility. We might adopt
the plan of Wisconsin and capitalize on
the results of our laboratory experi-
mentation.

The establishment of the Wisconsin
Alumni Research Foundation in 1925
was one of the most important steps
ever taken by an educational institu-
tion in this country. You will recall
that this Foundation was established as
a result of the work of Dr Harry Steen-
bock, who discovered that Vitamin A
could be obtained from various plant
and animal sources in highly concen-
trated form by certain chemical pro-
cesses. The importance of this undertak-
ing and the inadequacy of university
funds for the purpose directed attention
to the importance of patenting the ma-
chinery and capitalizing on the dis-
coveries made by scientists on the staff
of the university. According to an ar-
ticle in a recent issue of Review of
Reviews, it is stated that the royalties
derived from these sources amounted in
1930 to $354,490.00. This is approxi-
mately a $1,000.00 a day. The Founda-
tion's invested capital, at the present
time, is more than $400,000,000, and
it is stated that by the end of the year
it should not exceed a half million dol-
ars. The fact that these funds are not
derived from legislative appropriations
gives the board that administers them
a free hand in entering upon projects
of vast importance. I see no reason
why any university might not, in time,
follow the example of Wisconsin in
creating a source of funds of this kind
for research.

The problem of educational readjust-
ment, resulting from the economic de-
pression and other causes, naturally
creates concern. Will it be possible
to make these readjustments without im-
pairment to educational accomplishment? Unquestionably, it will be possible
to effect some economies without decre-
ing efficiency, but it is perfectly ob-
vious that there are definite limitations
to the extent to which this readjustment
may be carried without impairment to
the whole program of educational work.
It is unquestionably the duty of educa-
tional administrators everywhere to
make every possible effort to effect
economies in the face of the economic
situation. But the impossible must not
be expected of us. We must carry on.
The public will not be satisfied with
mediocre accomplishment or a restrict-
ed educational program. It is the duty
of educators everywhere to keep before
the public the essential dependence of
educational accomplishment on adequate
financial support.

There are many institutions much
better off than the University of Okla-
home at this time. This institution is
comparatively young. The older institu-
tions have been able to get their build-
ing programs much further along be-
cause of their age than we have been
able to do. The University of Okla-
home has been doing very well in re-
cent years. Had our normal progress
been maintained for three more legi-
