Frederic Remington_Horses of the Plains Century Magazine Jan 1289 Vol. XV

To men of all agesthe horse of Northern Africa ha sbeen the standerd of worth and beauty and speed. It was bred for the purpose of war and reared under the most favorable climatic condition, and it s descendents have infused their blood into all the strainswhich in our day are regarded as valuable. The Moorsstocked Spain with this horse, and the so called Spanish horse is more Moorish than otherwise. It is fair to presume that the lightly armored caviliers of the 16th Century, or during the Spanish conquests in America, rode thai animal, which has been so long domesticated in Spain in preference tothe inferior northern horse. To this day the pony of western America shows many points of the Barbary horse toyhe exclusion of all other breeding. His head has the same facial line; and that is the prime point indeciding ansestry in horses...... ... am quite sure that no sane don would have preferred a course-jointed Fleming weight carrier for use onthe hot sands of Mexico to the light and supple Barb, which would recognize in the sand and heat of HES new-world home an exact counterpart of his African hills. As the Spanishds worked north intheir explorations, they lost horses by the adverse fortunes of war and by their thier straying and being captured by Indians. At an/very early date the wild horse was encountered on he plaims of Mexico, but a long time elapsed before the horse was found inthe north. La Salle found the Comanch es with the Spanish goods and asbo also horses in their possession. but on his journeys to Canada it was with great difficulty that he procured horses from the Indians farther north. In 1680, Father Hhemnepin lived with the Sboux and marched and hunted the buffalo on foot . At a much later day a traveler heardtheComanches boast they" rembered when the Arapahoes to the north used dogs as beasts of burden."That horses were lost by the Spaniards and ran in a wild state over the dry plains of Mexico and Texas at an early day is certain; and as the conditions of life were favorable. they must have increased rapidly. How many years elapsed before thenorthern Induans procured these animals, with they are so thoroughly identified, is not easily ascertainable. Cheyenne Indians who were well versed int that tribal legend which is rehearsed by the lodge fire by the long winter nights, have told me gravely that they have had horses. Isuspect that this assertion has itsfoundation in the vanity of their cavilier souls , for the Cheyenne ledgends runs very smoothly, and has pale- face corroboration back to a period when we know that they could not have had horses. Only ont the plains has the horse reached his most typical American development. The range afforded good grass and they were bred indiscrim- in Gtely, both in the wild state, and in the hands of the Indians, who neter used any discretion of coupling the best specimens, as did the Indians of the mountains, be cause of the danger of thear being stolen or lost, thus making it unprofitable. Wild stallions continually herded off the droves of the Indians of the southwestern plains thus thwarting off anyendeavor to improve the stock by breeding, Itis often a question whether the " pinto" Or painted pony of the Texas is the result of a pinto ancestey or of a general coupling of all horses of all colors, The latter is/ I think , is the case, for the Bark was a one color horse, and the modern horse breeder in his science finds no difficulty in producing that color which he deems best.

The Comanches, Wichitas, and Kiowas hold that stallion in high esteem which is most bedecked and flared bybloches of white hat $\note \notr$ on the normal color of his $\note \notr$. The so called Spanish horse of northern Mexico is less apt to show this tendency towards parti-colored coat, and his sixe,
