

wait and do it after the project's complete.

Mr. Clement: Of course you're going to have a brick veneer on this house and your footing is going to come all the way down. It'd be kind of hard to get the dirt out from under there is the only thing. And uh.. the thing I'm trying to make say that there would be so many intangibles here. It would be a problem for Mr. Tompkins to really set a price. Because uh, how long am I going to have to wait for this man to finish giving us all that. And I think possible if you could encourage them to build it separate that uh..let's get this house together and get this house built and get on through with it. And then this, this individual can build their own storm cellar because I think an eighth and a quarter or an eighth and a half is what ya'll finally decided.

(Participants:) Eight and a quarter.

Mr. Clement: Eight and a quarter..so there should be ample room to put one on the project, or adjacent to..

(Participant, man:) Several..several of these sites have storm cellars on them.

(Participant, woman:) I think..think some of our Indians are getting storm because they're so old. If they're Indians they shouldn't be.

(Participant, man:) Mr. Tompkins in your plan of view for this particular house, are you exposing the heating duct in the hallway?

Mr. Tompkins: It's completely (not clear) in and sheet rocked. Covered.

(Participant, man:) That's the way we can service it.

Mr. Clement: Right. Course we can (not clear) on this final plan. And this is it..sort of first go round. We've got two more..

(Conversation.)

(Participant, man:) It's not in here. it's already eliminated.

(Participant, lady:) Oh, I see, uh-hum Okay, unless something in particular had been taken out. That's what I'm asking.

(Participant, man:) Yeah.
