

we do, we cut them about like that. Cut them, strip them, and then we get another one like this one. We'll make a bow out of it and then get another part like this. And we'll put..Prickle pear. Now if we didn't want it, we'd find plenty of it here. But those are stickers on them. Prickle pears. We'd get them with a knife and stick them in here. (ear lobe). We'd get these bow and a string and shoot grasshoppers with them. Use them grasshoppers to fish with see. Go fishing. Now you got some. That's something. You got it.

YUCCA:

(What is that?)

That's soap. (Yucca). You got you a good piece there. What you do is get this, get that and break them together. You get a bunch of them you can wash your head with it.

(It's called yucca.)

Yeah, that's it. In sand country they're bigger than that. They're twice as big as big as that. But in sand country you get more of it and better

If you had a trick. ? You got enough. You go up there around the Cobb Lake you get these easier. Take you a hoe like I was saying. Careful that hide is like a razor. (Which part, right here?)

This part. Main part of it, careful now. That knife is sharp. That'll keep. If it dries up well that's better. One day we'll run into that (toy arrow making plant) and I'll make you some of those (toy arrows).

We got these big grasshoppers to catch them perches. I'll show you how to fix them perches without grease. Without a pan. Without nothing see..

(Yeah).

Here is that stickers I was going to show you. You know the one we dug up at the house. She how pretty they look?
