

Yes. Build a new derrick on both places, have new derricks built. And partners in this now--now I'm just working. I'm not a partner in it. It's the D & W Mining Company owned by Sammie Lee Dryer and Neil Weiss, from out of New York City. And they are the principal stockholders in it.

(Is that your son?)

Yes, it is my son.

(And that's the capital it's coming from?)

Yes.

(Well, it should be good for Commerce.)

I would think it will put a few men to work in town and help make a living (not clear)--now ten or twelve foot down here--some people over here in town turned us in to the law. Said it knocked the air conditioner three inches off of it's base. (laughs) Over in town. (laughs) Impossible! Impossible you know to do a thing like that. And these are experienced miners. These men are good miners and good shaft men and they know what they're doing.

(I noticed Mr. Waters is helping.)

It wouldn't do nothing if it was laying on top, let alone down in that hole, but he said it knocked his air conditioner three inches off base. Hollering their heads off. And it's well over a quarter of a mile over to the house--that pink house you see through here. I'd say it's three thousand foot to the house (unidentified person talking in background). Yeah, that's the one we used for so long, but it's out in the pasture now, full of horses. I don't know what to say about the thing. (unidentified man asking a question in background is inaudible). Yeah, I know right where it is Carl, I--I wouldn't want it put in the paper or anything, but they drilled one up here. You are not supposed to give that information out. Eagle-Picher drilled it. And it run way up towards 50%--lead and zinc. But it's down so far that we can never find it because the water is too strong. They hit it at 345 to 370. The good part,
