

once, "Uggggh", she say like that and it just come out. My mother used to be...takes care of womens. I saw her do it...all them things. Sometime it won't come out land they just lay on their back and open their legs and put their knees up like this and she just put her hands down there and drag it out.

(The woman would be lying flat on her back?)

Flat on her back. She just pull it out.

(Was there any belief about a child being born feet first?)

Yes. Sometime they would some woman like that with her baby coming that way and if there ain't no man, you know that man... live far away from each other in them days and no way of getting quick and come right back like we got now, you know like cars that goes up there and comes right back. Some womans up there and their husbands are with them and if there a child in that family, it going vorn and feet coming out first, they just help one another and shake her and then turn her around just like that man did.

(Was there any sign associated with the sex of a child?)

No.

(How long was it before a woman would sleep with her husband again after she had her child?)

They just...probably every night.

(How old would the child be?)

Every night when...How it, don't matter because men are crazy they don't care if you in a family way or not, they just want it all the time. Want it every night, every night they get a chance, and finally the bigger you get they just leave you...leave you alone.
