

GHOST SICKNESS

They're--it's got foamy stuff under the skin.

(Now this is with the ghost sickness?)

Yeah that's what it does.

(Huh. Why, can you tell about ghost sickness, how do people get that?)

Oh they just get sick. Some people say, they see ghost. I never did see thost.. But you know the Indians say it's to drive off evil spirit.

(Yeah.)

Supposed you be walking way out there in the dark and something might touch you and you look back and that's when you get the crooked face. Or either when you sleeping it talks to you and scare you and when you look this way or that way you get a crooked face. That's what they said about--you know lots of times--I tried it one real dark night, you know, that's what I'm supposed to do because, that ghost hates me and I hate it. He ain't going do nothing to me because I can overpower that ghost. Overpower it, I could kill it. I could kill the thing that he got your person. He won't do that to me 'cause I got that medicine. And I walk here to the highway the darkest night--you couldn't even see this far. One night it took--see this is a ghost on the road but I never did see any. I went to the highway and then I come back and it was just about daylight when I was walking back in. I just want to try out if there is a ghost I never heard one, I never seen any. I walk up there and come back. Nothing did touch me--nothing was in my way. They say sometimes he walk behind you. And try to scare you but I didn't see nothing. I wanted him to scare me see how it feels, for it to scare me but I didn't see nothing. And nothing did scare me.

(Well, what are they?)

They're just, you've seen (not clear), don't you ever. That's what it is, them (not clear).

(Where do they come from? What are?--)
