that's got a trigger on it and you put a head of kafir corn or carrots whatever

there is - depends on what you are t rying to catch, you know. Now a rabbit,

you put fresh lettuce or corn or green beans or carrots, stuff like that. Anyway,

they caught these, we had this big place ((Irrevelant conversation with children))

and they caught those and hung 'em out. That night when this big freeze came, you

know - I mean it froze hard - all that stuff was hard up there. They had to break

it off the line.   Made thise lines like clothes lines only out of heavy wires and

had to hang 'em high enough, you know, my dad and them didn't get any sleep

because somebody said the community had some hound dogs trying to get at all those

birds and things. That's reason papa had a big box made - double thickness of

boards. See. Then we put them down in there, a layer of salt and layer of birds

and rabbits. Course then they were good. Now then they probably have to run me

down and tie me to get me to eat one of them.

(Did he try to keep them frozen all during rhe winter?)

Oh, no. You know how Oklahoma's winters are. You can't do that. That's reason

you put 'em in salt. Now there used to be peddlers come by. They kill a beef.

Then you didn't know what kind of beef it was. They'd throw the hide out someplace,

you know. / They cut this up in chunks. Now my mother had a big crock - I've got

one, Ten gallons , in there. I got pickles in it right now. I mean I'm making

some pickles and you know you take a mixture of black pepper and red pepper and

brown sugar ans salt and mix it up and biggest portion of it will be salt - and

you cut that beef just like you gonna cook it. If you want steak, you cut it like

steak and you put it down and that's what you call cornbeef, and it's very goood.

You know you can forn fish or anything, don't make difference. You can do

chicken that way. I don't like chicken that way because they get too soft.   You

can put a little - Oh I don't know what they call - they use packing house in

Oregon. It's kinda lime-like substance. Kinda makes it firm. It's against the
