

good sand. See. I had a concession out there on the lake before this lake out here, - Thunderbird - and so the road leading up to it is Stella road. Then they had to turn a half mile off at Stella, a quarter mile, somethin' like that - - (Unintelligible words) this new sand. I always call it "blow sand" 'cause it just blows like everything. It's finer than glass sand. That's what they use. That's why these roads won't hold up, well, you hold it in your hand and it'll creep out of your hand - it'll fall out. Now that's why. And they'll put enough tar - - you know what tar is - - and that old cheap crude they put on there., they buy the very cheapest crude oil that is junked out of what they've refined, you know all the junk. And 'course now these oil companies would cut my throat and will say I'm lying, but I know what I am talking about. I grew up around refineries and these things 'round here and I know. My brother worked with them since that nigh. And that's the very cheapest junk. If they'd put enough in it to hold it, well they, you know, then they could - - that sand couldn't creep. But you know what citizens do to make roads now-a-days? Beef blood, and if that woman's club doesn't stop 'em - oh, yes, well they not gonna make a whole road but you know neat contracts and sarinks? You know heat - and difference in heat and cold - you know it expands and shrinks and like that. It's for that purpose. See. And the beef blood will allow that without a lowing the road to break. There been some of it in use. In these cracks where you see that tar stuffed in there - well, they hold the tar so it don't soak into the ground and run off, you know. well, they put a hemp in there. They pulverize the hemp and that fiber from a palm, you know. And they pour that. But now then they use beef blood. (Irrelevant) Well it's like they use to gather up the bones off the prairie. You know what they used to do with that? They filtered their sugar through it.

(Judy: They what?)

They filtered their sugar. Sure. Now then they used, I don't know - some kind
