

deaths here within the last month right here in this town. And there's two or three deaths at Canton. One or two deaths around Colony-- among the Arapahoes. But the Cheyennes, there's been a lot of deaths. There's one death among the Cheyennes here not too long ago near El Reno. Well, all those are by--not too old people--but young people. Accident, or something like that. When they could have made use of their money if it was given out to us, say, in '63, lot of 'em would have had the benefit of it. But as it is, they're died and that money's not available yet. That's what hurts the Indians.

(When they do make the payment, will your daughter's boys get a share of it?)

No. They won't get a penny of it. They'll get their own. They'll each have their own. Three of 'em--they'll get about ten thousand for the three of the --their share. (How much would any individual get?)

Well, they say the original record, before there's any interest involved, in our judgment in court was about \$2600. Well, the Committee, through some maneuvering, had five hundred thousand dollars set aside for education and tuition and scholarships of the tribe's money. Which they really didn't have no right to without the consent of the Indians. Because that's our individual money. Like, your money's all in your account, and my money's all in my account. Well, what right do they have to take it, even though they have jurisdiction. That's by referendum. But that's what they did, so we sorta accepted it. But since that time, the treasurer has held that money at four per cent interest. Four and a quarter per cent interest. And since last February we loaned ten million out to the bank of America of San Francisco at five and three-eighths per cent, for six months, compounded quarterly. Well, that's matured. We haven't replaced that again until the time when it should be disbursed, at the same rate of interest. Well all right--we loaned four million out here to the First National Bank of Oklahoma City at five and a quarter per cent interest. Six months, compounded quarterly. That's matured, so that goes back in the Treasury. So through this interest from the Bank of America, and this interest from the Oklahoma City bank, and the four and a quarter per cent from the Treasury of the United States--that's probably brought it up about half a million more. So that would be more than \$2600 apiece. We think
