

And that was cancer way back when those Indians got it. And then up to today we learn from the white people that's the same kind of sores. That everybody got that broke out and they sometimes just die. They can't kill cancer--white peoples. No, they ain't no cure for it. But I know good and I seen well this medicine going to cure it because I seen it when my dad doctor with it. Because it came from that whiteman, that Dr. Shury-- he live back here--he's dead many years.

(What about if somebody was constipated all the time?)

When their bowels don't move my mother give them--melt that Indian lard-- set it on stove and dissolve it and when it cools down give them great big 2 or 3 tablespoons full of that. And its just like castor oil--when it works on you. That what she used. I saw them use it for my dad all the time when--you know my dad eat meat for breakfast, eat meat for dinner, eat meat for supper, three times a day he eat meat--pound meat. He eats that everyday. That, and coffee and bread. o That's all he eats. He ain't going to eat no oatmeal or no hing. Nothing besides no potatoes. He ain't going to touch potatoes. The one thing he like is fruit.
