

Mrs. Osborne: Talk loud, Grant, your not talking loud enough.

Anyhow that old man--

Mrs. Osborne: Any more questions?

SEVERAL INCIDENTS RELATED ABOUT HEALING BY THE DOCTORS

(Yeah, one more. What were some--can you give some situations where you might have seen these doctors treating somebody or healing somebody or where you may have seen them doctoring another person? Or did they do it in private?)

They do it in some other mans--in private. One time I saw--1900 I believe and I was a young boy. Had a Blue Hawk Camp over here west-of there down in the bottom.

Mrs. Osborne: You know right here where John Jake was? There use to be a big camp there. I don't remember.

I forgot who it was the patient was you know. They had gallstones--so they sent for old man Blue Hawk, he was there. And either John Blue Hawk one of them brought him over there. I was sitting in there and they laid him down there and brought him in there. They had black blankets. Them doctors had black blankets on Ramona and black moccasins. In there--old lady was-- had the old lady with him. So the old lady had little bowl about that big, wooden bowl and this man went over to that patient and with his mouth you know, start making like bear groaning, you know with mouth. I guess all the time he was trying to get that out. Get the stones out. Make big noise. I was a little boy sitting on the side there. And that's when I saw that one time, I was talking about that. One time I saw that. When they grabbed that. They took it out. Yeah, they took it out. And the old lady--no this is about the time she noticed these movements, you know. The old lady there--just about the time he died you know. Well, when the old lady hear that, that's when he died--got the old lady covered his head right quick with blanket and she put that bowl on there, you could just hear those stones drop. After that they put them stones in that bowl, and he got all right.
