

Look at that bunch right there. See that one standing up on point like that. You can just see it. I has been a long time since I tried to figure 'em out. These stars right here--see-- Now, this old boy come in here to the United States, he was here one night. He knows every star there. That red star. You ever seen that one?

(No.)

It's redder looking than the ones over here this way.

Mary: I can remember seeing it when I was little.

Ralph: Now he knows all about that one. It comes across the sky like a flower. I ain't seen him in about five years. He said he stayed across the water so many years and just comes back to the United States once a year. Then there's the evening star and the Morning Star. The evening star shines the brightest in early evening. The Morning Star comes up about daylight.

This old boy that won that award and knows all about the stars told me, "Did you know that you can count only about 3000 stars in the United States?". That's what he told me.

MANY KINDS OF TREES FOUND IN THIS AREA.

There's a lot of different kinds of trees around here. There is white oak, blackjack, red oak, post oak, cotton wood, pin oak, ash, hackberry, sycamore, dogwood, elm, just lots of different kinds of timber here.

CERTAIN TREES FOR MEDICINE

And every one of them trees is good for something. One time a lot of folks was down with the flu. And a lot of 'em would be gettin' over it and would have a cough, and couldn't get rid of
