

know who to get that understands it. Dr. Weiser, a German doctor that does this, but he's got a square instrument. He puts it on your flesh and he press it and it cuts it. Then he takes a mentholatum bottle or vaseline bottle and he's got alcohol. He stick that in there and burn it. Then he put it on there and he just suck. The main thing is to get that blood. Now they do that when they cut them. Right on top of this they've got a chewing gum, now-a-days. But they used to use a sinew when they do that. When they cut you, they get ready. Now Jenny does that, but her teeth is not--. She does it all time for about \$5 or sometming. They give her a blanket. But her teeth don't--. But when they do that, if there's a pain here (frontal sinuses) or pain here (temples), or pain here or here, well, they cut it when they cut it, they put a sinew here (center of forehead) and they suck the air. The suction, the air sucks out. I've got two of them. Mrs. Robinson wants one of them.

SUCTION TUBES USED IN REMOVAL OF CLOTS WERE MADE OF COW HORN

(Did you make these yourself?)

Cecil: I made them. It's made out of cow horn.

(Did you shellac this or something?)

Cecil: It's--it's--it's naturally that way--cow horn. And I took it and scraped it and I warnish it and Mrs. Robinson hasn't got one and she wants one of them. And Mr. Gillette at Fort Sill wants one. And I have to take a sinew and glass and put it there to make a history. That's what they suck their blood. I got them hid. Them kids might get them up. They go about \$5. Well, that's what they suck their blood. They do that up here. They do that here. Oh, my hearing aids and all like that. Well, they take you
