

place where they could work it. Work it then, work it on both sides and then just break it.

(What do you mean by they burn it? How would they burn it?)

Well, I've been using--that's what I been--see, I got that shovel? I burn. I put it in the gas stove, put it in there where it gets red hot and then I make my--.

(You put the end of this stick in the fire until it gets red hot?)

I'm going to give you some of this too.

(Oh, my. Oh, boy. Thank you!)

Those are--I'm going to give you some of--no, I better not, cause I might go short on them. Well, this is what they call the mes-callie bean. You got one. There inside of that but you can't crack them unless you've got a hammer. Oh, they're hard! They use a lot of them that grows in San Antonio. A lot of that--oh, Mrs. Robinson she give big money for them. They make them, you know, them beads.

(Beads?)

Yeah.

ICE-PICK TYPE TOOL USED AS HOLE PUNCH AND AWL

(Well, do you make the hole with this?)

Yeah, that's what I was going to show you. I put my gloves on, I don't do it bare, you see? I put that--this thing, you know that gas--put it in there and then when it gets hot, I just take it out and (pshhhhhhhhh). You couldn't do that with a knife because that's too hot.

(Well, can you do the same way for bone?)

Yeah, you can do that but I'd rather the way I do it to split that cause sometimes that bone is easy to split. See, that's been split, plum through. If I want to make a hole--you see, you've got to
