

(Huh)

I guess she said she just eat too much in the young days. (Laughter)

INDIAN MEDICINE - DOCTORING

(Yeah. Uh-huh. Well I've often wondered if any of the older ones still know about the Indian medicine and the things that grow up and down little streams and on the little hills. You know they used for medicine.)

Few of them.

(Very few. Uh-huh)

Very few. Mighty few people that knows that. Before, just about the time when I was raising up. Seem like people were more healthy then they are now.

(They were. Uh-huh.)

Just healthy people.

(They sure were.)

Seem like they didn't have no sickness going as much as they have now.

(And they didn't worry about anything. Now days everybody worries about something. Either that or everybody's in a hurry.)

Now they got--somebody that got sick in their family. That's what they did.

They went for somebody. You know..

(That's right.)

Indian medicine. Come. And first thing you know they're up and going again.

Yeah they kinda help them out. Straighten them out. My mother she used to drive out alot. Doctoring people.

(Uh-huh)

But that's something I don't know. I just see them here, or followed her.

I don't know if--.

(Yeah)

Course I've seen it. I can go out right now. I can be going down to the branch. I can see lot of things that she used for medicine.
