This report made on (date) October 13, 1937

Atoka, Atoka County, Oklahoma

1. Name of person owning collection C. E. Moreland  
 Address Lane, Oklahoma
2. Name (if any) of collection Hand-made stove and scales.
3. This collection contains the following types of material One stove  
made of fire clay and sheet iron; scales made of copper and  
steel
4. Amount of material Two pieces.
5. Material deals with Heating purposes, and weighing purposes.
6. Approximate period (dates) material is for 1860 to 1900
7. Locations of the collection (where it is kept) At C. E. Moreland's  
home near Butler School, Atoka County.
8. Condition of storage place Good  
 Condition of collection Fairly good.
9. What does the owner intend to do with this collection \_\_\_\_\_  
Would sell it.  
 Would he be willing to part with it? Yes.
10. Any other information about the collection, including its history \_\_\_\_\_
11. Does this owner know other people who have or might have collections.  
 Give names & addresses \_\_\_\_\_

NOTE: In the event that any of the above questions cannot be answered fully in the space allowed, attach blank sheets firmly, and give all available information. Referring to question by number.

Joe Southern,  
Investigator,  
October 13, 1937

Interview with C. E. Moreland,  
Lane, Oklahoma.

C. E. Moreland of near Butler School, Lane, Oklahoma, has in his possession one pair of double weight hand scales made with two hooks and two finger rings, with a half-moon circle inside the steel circle. Inside of the moon circle is a half circle made of copper with weight figures from one pound to three hundred pounds on the cast plate that holds the copper plate intact. Date of pattern is invisible.

From all accounts these scales and the stove described were used seventy-five years ago.

He also has in his possession one hand-made and mould stove made from fire clay with light weight iron covering and a slide door. This stove is made in wash-tub shape, 12 inches in height, 12 inches across the top with clay partition, with 14 3/4 inch circle holes for the heat to pass through. The firebox is beneath the partition with slide door for ventilation. This stove was made to burn coal or charcoal.

There has been a thick cast iron plate to fit on top of stove for cooking purposes and heating flat irons for

ironing clothes. This stove is so constructed that it can be used for heating tent or room without flue or pipe. The only inscription visible is "Champion-No-3," In fairly good condition. The wall of stove is one inch thick, made of clay.

Pictures of both stove and scales are attached to original copy of this manuscript.
